

WEEK 3 - STEP 1

Pick Your Battle

Choose your lens focus for your improvement proposal

1 Your Company

Company name from your Week 2 Scorecard

SAP

2 Choose Your Lens

Mission Drive

How deeply mission motivates decisions

Financial Gravity

Profit model & mission alignment

Governance

Structures protecting the mission

Mission Transmission

How the mission spreads & evolves

3 Your Strategy

Follow the Gap

Address your weakest lens

Amplify Strength

Make your strongest even better

Follow Interest

Pursue an idea that excites you

Follow the Path

A clear proposal is forming

4 Your Reasoning

Why I chose this lens (2-3 sentences)

advantages that can be leveraged to drive meaningful improvements. Rather than relying passively on its existing position, I see a clear opportunity to use that leverage more proactively to strengthen the company's mission and long-term impact.

The opportunity I see (1-2 sentences)

language models. Rather than developing these technologies itself, SAP can focus on providing strong interfaces and platform capabilities for data import and export, algorithm deployment, LLM integration, improved user interfaces, and controlled, verifiable AI-assisted workflow design.

Your Lens Choice

MY LENS CHOICE

Company: SAP

Chosen Lens: Mission Transmission

Strategy: Follow the Path

Why I chose this lens:

I chose this lens because SAP's strong market position gives it significant advantages that can be leveraged to drive meaningful improvements. Rather than relying passively on its existing position, I see a clear opportunity to use that leverage more proactively to strengthen the company's mission and long-term impact.

The opportunity I see:

SAP has an opportunity to make its ERP products much easier to integrate with emerging technologies such as data science, machine learning, and large language models. Rather than developing these technologies itself, SAP can focus on providing strong interfaces and platform capabilities for data import and export, algorithm deployment, LLM integration, improved user interfaces, and controlled, verifiable AI-assisted workflow design.
